SOUTRON

PRODUCT FACT SHEET

CAMS Metadata Management

A unique tool to help you create and manage a thesaurus, built into the Cultural Asset Management (CAMS) product.

OVERVIEW

This application allows a user to add, change, and delete terms in the thesaurus and relate terms to one another within a hierarchy.

Information professionals in archives, libraries and other cultural heritage institutions that work with digitalization projects, cataloging, and classifying materials for information retrieval all benefit from controlled vocabularies, which help ensure that terms, abbreviations, and acronyms are consistent and accurate. This controlled vocabulary provides an index for accessing and retrieving content through browsing and searching in a consistent and accurate manner.

MULTILINGUAL THESAURI · CULTURAL ASSET MANAGEMENT

KEY BENEFITS

What CAMS Metadata Management delivers

Support for business glossaries

- Designed for archivists, librarians, and knowledge managers to manage business glossaries, term lists, authority files, taxonomies, and thesauri.
- Supports digitalization projects, cataloging, and classifying materials for information retrieval.

Controlled Vocabularies

- Ensures consistency and accuracy of terms, abbreviations, and acronyms.
- Provides a reliable index for accessing, browsing and retrieving content.

Enhanced Metadata Management

- Improves data discovery and consistency.
- Enhances data integration and management efficiency.
- Increases search accuracy and standardizes communications.
- Enhances user search experiences.

30+ Years of Excellence

IT safe and secure

As a cloud-based solution, we manage your database safely and securely in the cloud, reducing the strain on your IT team.

Expand Info Access

Easily integrate with other enterprise applications, with support for Single Sign-on.

30+ Years Strong

Expertise in information management and database web technology from over 30 years across many industry sectors.

COMPLETE METADATA MANAGEMENT

Detailed Features

The application enables display and searching in systematic, alphabetic, and hierarchical formats.

Most importantly, metadata thesauri management provides online validation checks that ensure complete reciprocity and hierarchical integrity of the thesaurus.

DETAILED FEATURES

Online Validation Checks

Uniqueness Check
The term does not exist as another entry term in the thesaurus.

Duplicate Relation Check
The term does not exist in the same repeatable relation field.

Relation Check
The term does not exist in other relation fields in the record.

Verify Check
The relation term exists as an entry term elsewhere in the thesaurus.

Root Check
The term is at top level.

Reciprocal Check
The relation term exists as an entry term, the reciprocal relation field of which is the main term of the current record (both one- and two-way reciprocation are supported).

Multilingual Check
Checks that all mandatory language equivalents are entered.

Translation Check
Allows the copying of the language equivalents from the main term to the current relation field.

Integrity Check
Extracts descriptors and/or non-descriptors from scope notes.
