PRODUCT FACT SHEET · STREAMLINED LIBRARY OPERATIONS

CAMS Library Management System

A fully integrated, customizable library management system designed to meet the unique needs of academic, research, public and special libraries worldwide.

MODERN LIBRARY MANAGEMENT

Developed in 1976 in collaboration with library experts and continuously modernized since then, CAMS combines rich database management functionalities with comprehensive library automation to provide enhanced access to library resources.

MARC-based and non-MARC-based libraries alike can streamline their workflows, manage digital and physical collections, enhance user satisfaction and improve service delivery.

Powered by an internationally recognized database engine, CAMS is one of the most cost-effective solutions among the major integrated library systems (ILS) vendors.

30+ Years of Excellence

Benefits

- ✓ **No hidden costs.** A single annual fee that includes all software maintenance, support and hosting services.
- ✓ **Continual development.** Your needs will change, so our team is constantly updating features and functionality.
- ✓ **Improved accessibility.** No more information silos.
- ✓ **Flexible and functional.** Gives you control over how you organize and share your collection materials.
- ✓ **Complete solution.** Archive, library and museum solutions combined into one.

SAFE AND SECURE

Protected B cleared | Independent security reviews | 30+ years, no breaches

EASILY CUSTOMIZABLE

Complete library management solution

CAMS Library Management provides a tailored solution for any type of library or multicultural institution, enhancing efficiency and productivity. Improved workflows streamline library operations for all key library processes.

Customizable OPAC web portal

The easy-to-use OPAC provides simplified and experienced search modes, thesaurus operators, Boolean operators, truncation and proximity searching. Dynamic cross-asset integrated "Union" searching ensures the public can find anything at any time, regardless of collection type or location.

Acquisitions

Order processing, claims, cancellations, payments, vendor management and automated record creation.

Cataloging

Data entry, modification, authority control, MARC support and seamless integration with external sources such as OCLC, Library of Congress and AMICUS.

Comprehensive Metadata Management

Easily build business glossaries and manage taxonomies.

Serials Management

Automate check-ins, routing, circulation and weeding based on user-defined frequencies.

Circulation

Streamline checkouts, renewals, holds and patron management with easy inventory control.

Customizable Reporting

Predefined reports and a complete report generator to build on-demand reports are provided.

Safe and secure database

The internationally proven, multilingual CAMS HRDBMS is one of the safest database engines available. CAMS is cleared to Protected B status from IT and physical perspectives, and the software has been in use for over 30 years without any security breaches.

CAMS has several applications built for security, anti-terrorism and tracking systems, and has consistently passed independent security reviews. With these security and auditing tools built in, CAMS clients can rest assured that their data is safe and secure.

Integrations

Integrates seamlessly with CAMS Archive Management and CAMS Museum Management to provide a complete cultural heritage solution. CAMS also integrates easily with other systems through various protocols, including XML, SOAP, ODBC, API integrations, MARC import and Z39.50/87.
