SOUTRON

PRODUCT FACT SHEET

AI metadata extractor and AI summarizer

From manual cataloging to expert curation.

OVERVIEW

AI extracts metadata and abstracts from your PDFs. Your catalogers review every suggestion before the record enters your Soutron catalog.

Three LLM choices: Anthropic, Google or OpenAI

Key Benefits

Eliminates Manual Entry

Real-time extraction of abstracts, ISBNs, authors, page counts and copyright.

Custom Taxonomy Mapping

Map extracted values into your organization or department custom fields.

Metadata Quality Control

Human in the loop review flags anomalies and inconsistent tags before ingestion.

Scalability

Bulk import and review new records to catalog at scale.

How It Works

– A cataloger selects a PDF for the catalog.
– Claude, Gemini or ChatGPT extracts the metadata.
– The AI assistant presents the fields for review.
– The cataloger accepts, corrects or rejects each suggestion.
– Approved records are ingested automatically.

Available now to clients on current support or subscription agreements.
